Chicago, IL | +1-872-899-7710 | dattasaivvn@gmail.com | <https://www.linkedin.com/in/dvvn>

Summary

Data Scientist and MSCS UIC Graduate with 3 years of combined experience in machine learning, software, and research. Skilled in statistical modeling, product analytics, and experimentation using Python, SQL, R, and visualization for data-driven product insights. Combines quantitative rigor with applied research and experimentation to optimize data-informed product decisions at scale.

Education

University of Illinois Chicago, Chicago, USA

Aug 2024 – May 2026

Master of Science in Computer Science

Relevant Coursework: Data Science, AI Engineering, Network Communication, System Engineering, Machine Learning

Skills

Programming Languages & Tools: Python, SQL, R, MATLAB, Git, Jupyter, VS Code, Linux

ML: Scikit-learn, XGBoost, Regression, ANOVA, Hypothesis Testing, A/B Testing

DL and NLP: PyTorch, TensorFlow, Keras, BERT, spaCy, Sequence Modeling

Data Visualization: Tableau, Power BI, Matplotlib, Seaborn, Dashboards, Data Storytelling

Data Engineering & Databases: Spark, Hive, BigQuery, PostgreSQL, MySQL, Airflow

MLOps: MLflow, Docker, FastAPI, AWS (S3, Glue, SageMaker), GCP (BigQuery, Vertex AI), CI/CD

Experience

System Engineer

Aug 2022 – Aug 2024

Alstom Transportation, Bangalore, India

- Built ML and OCR pipeline to extract and classify requirements from customer documents using Python and NLP.
- Engineered features and trained models with Scikit-learn and PyTorch to improve accuracy and reliability.
- Deployed FastAPI-based inference service on AWS for real-time requirement classification and allocation.
- Automated reporting and traceability dashboards in Power BI to monitor model performance and compliance.

AI/ML Research Intern

Jun 2022 – Aug 2022

Indian Institute of Technology Ropar, India

- Preprocessed and analyzed research datasets using Python, Pandas, and NumPy for ML pipeline development.
- Implemented supervised and unsupervised learning models including XGBoost, SVMs, and clustering algorithms.
- Validated models with cross-validation and visualized results using Matplotlib and Seaborn for reproducibility.

Data Science Intern

Jan 2022 – Jun 2022

Ernst & Young, Chennai, India

- Built predictive models using Regression and Decision Tree algorithms to forecast IT service response time.
- Automated data collection and preprocessing pipelines with Python, Pandas, and SQL for analytics reporting.
- Deployed ML workflow on ServiceNow data to identify process bottlenecks and improve efficiency metrics.
- Visualized model outcomes and KPIs using Power BI dashboards for data-driven decision-making by leadership.

Projects

Forecasting & Experiment Evaluation Engine | *Python, R, TensorFlow, SQL, GCP, Tableau*

- Engineered time-series models for forecasting metrics and analyzing experimental outcomes.
- Combined causal inference with regression to evaluate incremental lift across experiments.
- Enhanced experiment reliability and reporting speed by 40% through automated pipelines.

Product Impact Analysis Platform | *Python, SQL, R, Scikit-learn, Tableau, Airflow, GCP BigQuery*

- Built analytical pipelines for evaluating feature impact using experiment and behavioral data.
- Automated A/B testing workflows with Airflow and integrated visualization dashboards in Tableau.
- Reduced decision turnaround by 35%, improving data-driven product iteration cycles.

User Engagement Modeling System | *Python, Scikit-learn, XGBoost, SQL, Power BI, AWS*

- Developed statistical and ML models predicting engagement and retention for digital product cohorts.
- Designed automated data ingestion and model retraining pipelines using AWS and SQL workflows.
- Improved retention prediction accuracy by 20% and enabled proactive product strategy planning.
